VOGUE

Welcome to Vogue UK – the country's leading manufacturer of heated towel rails, designer radiators and accessories. Established in 1990 within the heart of the West Midlands, and still privately owned by its original founders, Vogue UK continues to design and create more products than any other company in this field, constantly leading the trend by combining fashion with functionality.

Everyone has their own sense of style and that's why Vogue UK has created a range of products that meet the needs of every interior design style. If you require something unique then our craftsmen can create a design to your exact brief. As Vogue UK have been creating towel rails and designer radiators since 1990 the company has built an extensive portfolio of designs and can offer a bespoke service, ideal if you're looking to create an authentic period look or simply match an existing design.

Our six categories of products in this brochure and on our website are sure to encompass the perfect design for you..... no matter what shape, style or size you're looking for.

Bespoke Design & Manufacture Service

‘Liberty to Customise’

If your exact requirements are not illustrated within our literature, we offer a bespoke service. This service allows you to customise your towel rail or radiator dimensions, materials and finishes.

‘Freedom to Realise Your Ideas’

We can work from any design specification and handcraft special products from high quality brass or stainless steel. Our team will offer technical advice to ensure your design is viable before a quote is issued for approval and the product is manufactured.

‘Commissioned Project Expertise’

We are dedicated to combining innovative design with a high level of client services. This collaborative design process involves the active participation of you, our client.

We help clarify visions, execute 3D designs and manufacture the bespoke end product.

Every effort is made to ensure the design process is swift. Vogue UK has extensive experience working with architects, contractors and individuals alike.

A fixture of yesteryear.

The Baroque uses a classical white mild steel column radiator within a handcrafted, chrome plated, brass framework. Superior heat output and towel hanging space are abundant in this imposing feature design. Many designers place the Baroque in the centre of a bathroom, often next to a free standing cast iron bath. Please see pages 137 & 138 for finishes and colour options. Prices shown are chrome finished for central heating models.

VOGUE Designer Radiators

Our radiators add warmth and style to any interior scheme.
Radiators can be so much more than white panels on a wall.

Vogue UK designer radiators are a mix of classical and contemporary designs.
They come with our pedigree and quality guarantee.

QUILT Wall Mounted DR021

The Quilt is unique. This fabulous design boasts a polished stainless steel facia over a mild steel radiator. The effect of the polished steel with its quilted pattern is a statement piece for any contemporary room.

With a great heat output the Quilt is available in three different sizes.

Mode suits traditional properties, yet also looks great in contemporary settings.

Available in a wide range of sizes, so you can choose a radiator which exactly suits your space and required heat output. The standard colour finish is white RAL 9016. Other RAL colours are available. Please see page 137 for other colour options.

Wall brackets are included, feet and other fixing accessories are detailed on the next pages. Please see page 135 for valve options.

Standard Stock Sizes (opposite)

We stock 2, 3 and 4 column radiators. Heights range from 300mm great for under window sills, to a 1800mm tall version. There are many sizes in between.

Non Standard Sizes (next pages)

Non standard sizes include 5 and 6 columns ranging from 300mm - 2000mm high and detailed on the next pages. Non stocked and colour finish options have an eight week lead time.

This service gives the opportunity to order non standard sizes. Choose from wall or floor standing. These radiators are supplied in white RAL 9016. Coloured finishes are available, please see the colour chart on page 137. The lead time for delivery is approximately eight weeks. The sections cannot be joined on site. We only supply complete radiators, practical considerations need to be given to weight, carriage, handling and accessibility. Where necessary large radiators can be supplied in module format. Contact our sales office for further information.

Accessories for Mode Column Radiators

Stock
or made
to order

Calculations for Sizing a Radiator...

Column Radiator Feet AC028

Adjustable Feet AC024
Height from 90mm to 120mm.
Must only be used with top
retaining stay.

Base Plate Cover AC025
For use with adjustable feet (above).

Top Retaining Stay AC026
For use with adjustable feet.

Heavy Duty Wall Brackets
Available for 2 to 6 column radiators.

Standing Brackets
For use with glass walls etc...

Welded Feet
(Increase height by 100mm)
Up to 20 sections requires two feet
21 to 40 sections three feet
41 to 58 sections four feet

Required output is 1200 watts

Space available is 1000 mm high x 750 mm wide. Approx radiator dimensions 900mm high x 600mm wide.
(Taking into account space for valves)

Number of sections possible

Width (600mm) divide by 45mm per section
+ allowance for each side.
 $600 - 24$ divided by $45 = 12$ sections.

Heat output per section

Divide your required output by sections.
 1200 watts divided by $12 = 100$ watts per section.

Selecting your radiator section

$4-750 @ 102$ watts per section. Therefore
 12 sections $@ 102$ per section = 1224 watts
 $@ 50$ degrees C delta T.

Price calculation

$12 \times £37.00 = £444.00$ ex VAT
Plus feet if floor standing and any other non standard support brackets you may require.

Dimensions

The nominal overall length of a radiator = number of section
 $\times 45\text{mm} = 24\text{mm}$ for reducing bushes (12mm each end).
Subject to manufacturing tolerance of $\pm 0.6\text{mm}$ per section.

Eco is a cost effective electric radiator which allows you to control room temperature. It also has an integral economy function and frost protection.

A sleek unit with digital programmable technology. The programmer can be safety locked to avoid accidental alterations. Stromboli has a comfort, economy and frost protection settings, great for houses unoccupied for weeks at a time.

Both models are available in five different sizes. Electrical components are covered by a two year warranty.

The Mode electric radiator compliments traditional and contemporary interiors to a tee. Manufactured from mild steel, supplied as standard in a white RAL 9016 powder coated finish. Most RAL colours are available as a special order. Available in seven stock sizes, 2 - 3 weeks delivery wall mounted. 4 - 6 weeks floor mounted with welded feet. Bespoke sizes are can be arranged. Electrical components are covered by a two year warranty.

Electric Controls

- White as standard.
- Matt chrome finish is available.
- Temperature control between 10°C and 65°C.
- Led power indicator with frost protection.

SILENT Design 100

- Silent elastic blocks
- Sealed for life ball bearings
- Back draught shutter and airflow guide vanes
- High performance and quality
- Incredibly silent running
- Energy efficient
- 8 Watts / 230 Volts
- IP45 rated

A range of 100mm domestic axial extract fans for wall or ceiling installations, designed to solve ventilation problems in WC's and bathrooms. Fitted with motors mounted on silent elastic blocks, the fans deliver incredibly silent running and exceptional performance and stylish design.

ECO dMEV

- Up to 6 adjustable trickle speed settings
- Timer, humidity sensor and pull cord models
- Complies with Building Regulations. Part F for system 3 Continuous Mechanical Extract
- SAP Appendix Q eligible achieving a low specific fan power of 0.28 W/l/s
- Incredibly silent running - Below 20 dB(A)
- One fan for all situations, both walls and ceilings
- Low Energy DC 1.5 Watts - Low voltage version available
- 4 Interchangeable front panel trims

The ECO dMEV has been designed and developed to offer the market a constant volume, continuously running, decentralised extract fan for the lowest power consumption, the lowest noise and lowest lifecycle costs.

SILENT MV

- Sound absorbent insulation
- Incredibly silent running
- 360° rotating connection box
- Sealed for life ball bearings
- Fitted with a two speed motor
- Complies with building regulations
- High performance with flexible location
- Easy installation and maintenance
- IP44 rated

The SILENT MV fan range offers one of the most versatile fan systems on the market today. Due to its flexibility it can be used in a multitude of small and medium fan installations. Especially advantageous in applications where the system may be running for long periods throughout the day, the acoustic benefits of the SILENT MV fans ensure that optimum comfort is achieved without the disturbance of noisy ventilation systems.

SILENT 100

- Also available in silver on silent elastic blocks
- Sealed for life ball bearings
- Back draught shutter and airflow guide vanes
- High performance and quality
- Incredibly silent running
- Significant energy savings
- 8 Watts / 230 Volts or 13 Watts / 12 Volts options
- IP45 / IP57 SELV version

100mm domestic axial extract fans for wall or ceiling installations. Designed to solve ventilation problems in WC's and bathrooms. Fitted to motors mounted on silent elastic blocks, fans are incredibly silent running and exceptional performance.

ELECTRIC Underfloor Heating

There is nothing that quite matches the comfort of warm feet when getting out of the bath or shower, especially in the cold winter months! Imagine stepping onto warm tiles controlled to the temperature you prefer.

Electric underfloor heating works by gently warming the mass of floor which in turn warms the rest of the room. Our underfloor heating kit is quick and easy to install. Ideally timed when you are fitting a new kitchen or bathroom. Electrical components are covered by a two year warranty.

The Underfloor Heating Kit Includes

- The correct size heating mat.
- Digital touch screen timer and thermostat.
- Floor sensor and floor sensor mounting pipe.
- Multimeter to check installation at every stage.
- Comprehensive installation manual and control card.

Putting You in Control...

The digital touch screen, completely programmable timer and thermostatic controller enables you to fully regulate the temperature and control when the heating is on or off. The manual override means at the touch of a button the temperature can be higher or lower to suit as and when it is needed.

VOGUE

Additions and Accessories

So you've found your perfect towel rail... Now add the perfect finishing touches. From high quality valves to the latest technology in heated electric elements....

ELECTRIC ELEMENT ONLY Prices

Standard Element

IP55 Suitable for zones 1 and 2 of the bathroom.

Each standard element contains an internal preset over the temperature switch and fail safe fuse. There is no thermostatic control although a suitably rated rheostat (CD-VR) will give thermal control when fitted into the electrical supply circuit.

Available as a summer kit for dual fuel options. See Page 133 for tee piece AC003

Product	Watts
EE002	75w
EE002	100w
EE002	125w
EE002	150w
EE002	200w
EE002	300w
EE002	400w
EE002	600w

Thermostatic Element

IP44 Suitable for zone 2 of the bathroom.

Electronically controls room temperature and has a two hour boost function. It also has the benefit of a frost protection function.

Available as a summer kit for dual fuel options. See Page 133 for tee piece AC003

Product	Watts
EE003 White	150w
EE003 Chrome	150w
EE003 White	300w
EE003 Chrome	300w
EE003 White	600w
EE003 Chrome	600w
EE003 White	900w
EE003 Chrome	900w

Electronique Element

IP66 Suitable for zones 1 and 2 of the bathroom.

The standard Electronique element is set to a constant surface temperature of 52°C, with no need for external controls. In the fully loaded towel warming mode it will act to reduce power and save running costs. In space heating mode it will increase the power to deliver background heat needed to the maximum of its rated capacity. A safe to touch system, with safety measures incorporated.

Available as a summer kit for dual fuel options. See Page 133 for tee piece AC003

Product	Watts
EE001A	200w
EE001A	400w
EE001A	600w

Remote Controlled Heat Element

IPX4 suitable for zones 1 and 2 of the bathroom.

Negative Temperature Coefficient technology
7 day programmable element with remote control switches the towel rail on and off when you want, at the temperature you want. Eco, boost and safety lock features included, and manual override allows you total flexibility when needed. Can be retro fitted to existing electric or dual fuel multirail towel rails.

*Please note, Element only suitable for vertical installation

Available as a summer kit for dual fuel options. See Page 133 for tee piece AC003

Product	Watts
EE005	300w
EE005	600w
EE005	900w

Contract Fixed Heat / LST Electronique Element

IP55 Suitable for zones 1 and 2 of the bathroom.

Fixed Heat is designed as an energy saving element to control temperature and consume only the correct amount of power required. It maintains your pre-set temperature whether the rail is in a cold bathroom empty or fully loaded with towels. Fixed Heat for LST (low surface temperature) of 43 °C must be chosen to comply with LST legislation for use in public buildings, hospitals and care homes.

Product	Watts
EE001C	200w
EE001C	400w
EE001C	600w

Heat Sensor Element

IPX5 suitable for zones 1 and 2 of the bathroom.

Five temperature settings ranging from 30°C to 60°C. The device displays the temperature to which it is currently set and indicates the status of the heating cycle.

Optional accessory is the cover shroud to hide the cable

EE006	400w
EE006	600w
EE006	800w
EE006	1000w

Standard Rail Option (H) and (C)

Multirail Option (H) and (C)

Heating Only Options

Heating and Hot Water this is suitable for all heating and hot water systems. For connection to either direct (open) or indirect (closed) central heating systems.

Suitable for indirect (closed) central heating circuits only. It cannot be installed on an open circuit due to the product containing ferrous (steel) parts.

Standard Rail Option (E)

Multirail Option (E)

Electric Only Options

A completely independent unit requiring only a fused spur electric connection. Thermal transfer fluid is heated by an electric element within the towel rail.

Standard Rail Option (D)

Multirail Option (D)

Dual Fuel Options

The towel rail has the capability to run from a central heating circuit or an electric element. Handy in the summer months when the central heating is turned off.

Please Note:

When using the electric element only (ie; during summer), allowance must be made for thermal expansion within the product by having the 'return' radiator valve left partially open. The 'flow' radiator valve must be closed to prevent back flow through the system. Both valves should be opened and balanced when the central heating system is operative, (i.e. during winter).

Steel Rails - Must be installed in accordance with BS7593 where a corrosion inhibitor is used.

Brass Rails - Caution where water softener is installed, as this could cause dezincification (material is attacked ie. zinc eaten away by aggressive water).

Brass towel rails are manufactured using dezincification resistant brass, however it should be understood that the term 'resistant' does not entirely preclude the possibility of dezincification occurring. If you intend to install the product on an open (DHW) circuit, make reference to your local water authority to ensure dezincification has not previously occurred. Towel rails manufactured from brass tubing should not be installed on an open circuit if a water softener is present. Water analysis to determine the likelihood of dezincification is available at cost.

Models suitable for indirect (closed) circuits only cannot be installed on an open circuit due to the item containing ferrous (steel) parts. Product compatibility is the responsibility of the installer.

FITTED ELECTRIC & DUAL FUEL Pricing

This section contains a range of elements with price supplements for electric and dual fuel models.

Please add the price of your element to the model you choose and we will build it for you.

Standard Element IP55 Code EE002

A benchmark element to suit each size of product.

Electric Only

Dual Fuel

Electronique Element IP66 Code EE001A

Maintains surface temperature of product to 52 °C.

Electric Only

Dual Fuel

Thermostatic Element IP44 Code EE003

Variable room temperature control function.

Electric Only

Dual Fuel

Remote Controlled Heat Element IPX4 Code EE005

NTC – Negative Temperature Coefficient technology. Remote controlled programmable element for adjustable temperature control.

Electric Only

Dual Fuel

Fixed Heat / LST Electronique Element IP55 Code EE001C

Ideal for LST applications where surface temperatures need to be guaranteed.

Electric Only

Heat Sensor Element IPX5 Code EE006

An electronic temperature sensor control.

Electric Only

Dual Fuel

* Dual fuel models will also be supplied with a conversion tee where applicable. This can be used with VL013 valves for a multitrail. Alternatively to a conversion tee dual fuel valves VL015 can be used.

All the images of elements depict electric only versions. Dual fuel configurations may vary including element positioning. The appropriate standard versions will be supplied in all cases unless advised otherwise.

Electric towel rails are filled with a glycol ethylene / water mix to strict guidelines. This improves the thermal transfer rate and acts as a corrosion inhibitor.

All electric and dual fuel towel rails must be fitted by a qualified person.

The elements are fitted on the right hand side as standard. They can be left hand mounted on request.

This section contains information on electrical safety.
IEE Wiring Regulations have identified the following zones and IP ratings to ensure safety.

IP Zoning

ZONE 0	Inside the bath or shower. Any fitting here must be SELV (max 12v) and a minimum rating of IPX7. (Protection against immersion in water).
ZONE 1	Above the bath or shower to a height of 2.25m. A minimum rating of IPX4 is required * See note 1.
ZONE 2	The area stretching to 0.6m outside the bath or shower and above the bath or shower if over 2.25m. A minimum rating of IPX4 is required * See note 1.
OUTSIDE ZONES	Anywhere outside zones 0, 1, and 2. Where water jets are not used for cleaning purposes, the general rules BS7671 apply. * See note 1.

All final circuits require 30mA RCD protection.

Notes

- In zones 1 and 2 if there is a likelihood of water jets being used for cleaning purposes a minimum of IPx5 is required.
- Where ceiling heights exceed 2.25m, the zones are effectively up to 3m, beyond 3m the walls are out of scope.
- Basins are not covered, however they are usually considered zone 2.
- If the space underneath a bath cannot be accessed without tools that space is considered out of zone.
- Information contained on this page is for guidance only. Please refer to current IEE Regulations or a qualified electrician.

IP Rating Guide

The IP (ingress protection) rating given to an enclosure states the degree of protection of offers by means of two digits. A summary of these are detailed below. For more information please see IEC 529: 1989 BSEN 65029:1992.

First Digit

Protection against solid foreign objects and access to hazardous parts.

At the lowest of seven levels is 0, this means no protection is offered. At the highest level 6, there shall be no entry of dust particles.

Second Digit

Protection against entrance of water on a progressive scale. At level 1 dripping water shall have no effect. at level 6 water from powerful jets against the enclosure shall have no effect.

The letter X can be used in place of the first digit or second digit to indicate that tests have not being carried out or are not applicable.

0		No protection.	0		No protection.
1		Protected against solid objects larger than 50mm e.g. accidental touch by hands.	1		Protected against vertically falling drops of water e.g. condensation.
2		Protected against solid objects larger than 12.5mm e.g. fingers.	2		Protected against direct sprays of water up to 15° from the vertical.
3		Protected against solid objects larger than 2.5mm e.g. tools and cables.	3		Protected against direct sprays of water up to 60° from the vertical.
4		Protected against solid objects larger than 1mm.	4		Protected against water splashed from all directions - limited ingress permitted.
5		Protected against dust (no harmful deposits).	5		Protected against low pressure jets of water from all directions - limited ingress permitted.
6		Totally protected against dust.	6		Protected against strong jets of water e.g. for use on ship decks - limited ingress permitted.
			7		Protected against the effects of temporary immersion in water between 150mm and 1m.
			8		Protected against continuous submersion at a specified depth.

IEC 529, bs en 60529 does not apply to any risk of explosion or conditions such as humidity, corrosive gases, fungi or vermin. In certain cases equipment designed to be mounted in an enclosure will contribute towards the stated IP rating (eg Push buttons mounted in an enclosure). Different parts of enclosures can have different degrees of protection and still conform to the standard (e.g. Enclosures with pre-drilled conduit entry. All information strictly for guidance only, please refer to regulations and manufacturers for information if you are in any doubt.

VALVES

Arne VL003

A contemporary classic that works with many designs.

Arne Thermostatic VL004

Controlling the heat of your towel rail or radiator.

Xero VL012

This modern tap head style suits many bathroom taps and fittings.

Piazza VL014

This cubed valve gives a great finish to our square tube products.

Combination Kit VL013

A combination kit of VL003 straight and angles valves for dual energy option, applicable for all multirail products.

Adapta VL001

A contemporary angled valve, almost not to be noticed.

Dual Fuel Valves VL015

For both central heating and electric dual fuel options.

Valve 2	Description	Type	Stock or made to order
Arne VL003	1/2" BSP X 15 mm	Straight	✓

Dual Fuel VL015	1/2" BSP X 15 mm	Angled	✓

Art Deco VL006

These valves work well with the hexagonal tube deco designs.

Crosshead VL008

A valve that suits most traditional designs. Our benchmark.

Crosshead 2 VL018

A capstan style valve, which suits ball jointed products.

Excelsior VL010

Thermostatic, a substantial valve in a time honoured design.

Valves are supplied as standard in a chrome finish.
Other finishes are available.

Please contact our sales office on 01902 387000
to discuss your requirements.

The colours below are available on many of our ranges carrying the RAL colour symbol. The featured colours have a supplement on the white price. Other RAL colours are available POA.

Vogue UK Radiator Colours - POA

RAL colours come in a gloss finish as standard, unless specified differently.

The RAL colours in this chart have been matched as closely as possible. The colour depends on the printing or your monitor. We suggest the official RAL colour chart gives the most accurate colour sample.

Vogue UK Contemporary Colour Range

The contemporary colour range is available as a stocked item in three models Serene, Vela and Focus. Latte, Cappuccino, Mocha and Anthracite have a textured finish, with Espresso and Black being gloss. These finishes are also available on other ranges.

Antique Bronze, Antique Brass & Antique Copper - Due to the reaction of the bronze solution with the base metal there will always be a degree of natural variation in the shade between different components.

Un-lacquered/un-protected polished material will discolour in a short space of time and will need regular cleaning to preserve the finish.

General terms & conditions

Bespoke items are non-returnable. Please note that certain non-stock models are also non-returnable, please confirm with our Sales Office on telephone +44(0) 1902 387000.

All heat outputs are shown at 50°CΔt, in compliance with BSEN442 - Specification for Radiators and Convectors. To convert to 60°CΔt, multiply heat output by conversion factor 1.268 (approximate figure).

All measurements given are nominal dimensions only (mm), and are not binding. Detailed technical drawings are available on request from our Sales Office on +44(0) 1902 387000 or via our website - www.vogueuk.co.uk

Manufactured from hot brass stamped fittings and high quality brass tube complying to BS2871.

Some models manufactured from high grade CR steel tubing and/or containing steel components suitable for closed/indirect circuits only. All rails are pressure tested to 100p.s.i (6.9 bar) air immersed in water. All models are fitted with 2 x 1/2" BSP F.I. connections. Alternative M.I. or compression fitting is available on request. 3/4" BSP connections available at extra cost on some models.

A manual bleed air vent is fitted to all hot water/dual fuel models. Auto air vents available on request at additional cost.

Pipe centres are provided as centre to centre tappings using the Vogue (UK) range of valves.

In compliance with our policy of constant improvement we reserve the right to alter specifications, materials and dimensions or discontinue any of our products without prior notice.

The colours in the brochure are as accurate as the colour printing processes allow. Photographs for illustrative purposes only. We reserve the right to change specifications without prior notification.

Vogue (UK) Ltd recommends that existing or new pipework is not adjusted until the towel warmer or radiator is installed in its final position.

Products ordered incorrectly or where the specification has changed may incur a re-stock charge. Bespoke/custom made products are non-refundable. Upon the return of a product Vogue (UK) Ltd reserve the right to refuse credit if the product is not made available upon an agreed collection/return in line with the Company's terms and conditions.

A copy of the Company's full Terms and Conditions of Trading is available on request.

Continual Improvement

Our company policy is one of continual improvement and Vogue (UK) Ltd reserves the right to amend designs, specification or discontinue any of our products without prior notice. E & OE

Valves are NOT supplied with each product. Please see Valves & Accessories section for further details.

Guarantee

Vogue (UK) Ltd is a company that celebrates the wealth of traditional, quality handcrafted heated towel rails and radiators and is one of the last true manufacturers in the UK. Vogue branded towel rails installed within the UK are also covered by an extended 2, 15 or 30 Year Guarantee – subject to Terms & Conditions of guarantee against manufacturing defects. Components such as inset radiators not of our manufacture which become faulty by reason of defected materials are guaranteed to our suppliers 2 year guarantee only.

EN442.1 & 2

Where applicable product within this publication has undergone independent testing to verify heat outputs are in accordance with the parameters laid down in the above European standards. Some products at the time of print may be awaiting confirmation

Construction Product Regulations (CPR)

In compliance with the above, Vogue UK LTD (The company) holds declaration of Performance Certificates (DoPs) for all products covered by the Harmonised Standard EN442.1 / 2. Copies of relevant certificates are available on request.

Product with a declared heat output of 200Watt or less 50 degree C Delta T are not classified by The company as heating appliances and are therefore not covered by the above. All individually manufactured bespoke products are similarly exempted from the above legislation

ISO 9001:2008 certified

Vogue (UK) is proud to be ISO 9001: 2008 certified. Quality is utmost in importance to our organization, in both the products and services we provide our customers. Reflecting this commitment, Vogue (UK) implemented and received certification of our Quality Management System in accordance with ISO 9001:2008.

General

Carriage - Paid UK mainland, excluding requests for next day service, Export carriage can also be arranged. Please contact our Sales Office for details on telephone +44(0) 1902 387000.

Innovation

Vogue UK is a vibrant organisation with research being conducted in many technology disciplines. This research results in exciting products as evidenced throughout the design collections we offer. Vogue UK has set itself a clear objective: both through consistent preservation and long tradition of British craftsmanship and meeting its high standards, as well as creating, with its very own innovative heating developments, contemporary design and a heightened passion for detail and perfection.

Those who appreciate lasting value derived from the synergy of traditional craftsmanship, creative development and the latest technology, as well as dedication in seeking the extraordinary know not to entrust any towel rail design but rather to a design crafted from Vogue (UK).

Vogue UK emphasises its creative drive to differentiate its towel rail designs down to the finest detail and its desire to monitor, to the greatest possible extent, the development and manufacture of a hand crafted product. We use the latest technology to produce low-volume individual parts with high added value continuously offering home interiors and connoisseurs of design new, impressive towel rail models.

Environment

Vogue UK has a legacy of core values, rooted strongly in safety, health and environmental stewardship. For 25 years, we have been reducing the environmental footprint of our own operations. Today, footprint reduction is expected of all companies. The challenge – and the opportunity – are products and manufacturing processes that are safer, less toxic, more energy efficient, use less water, less energy, and produce fewer greenhouse gases. Running our company in an environmentally friendly way is good for the environment and good for our business. We're working to conserve energy and reduce waste and are exploring the use of sustainable materials and products. Whether we're saving costs by reducing energy consumption or creating covetable products through innovative, sustainable design, we believe that reducing our impact on the environment can also result in positive business benefits.
